

DATA & IT SECURITY

Data security and IT security are critical components in software development. Additional security demands are made, especially when dealing with patients and medical data.

Project Tasks:

- Creation of an IT security concept for (medical) software
- Review of existing interfaces in company ware, backend, and app
- Suggestions for improvement & catalog of measures
- Implementation of the measures

EVERSION Technologies is a MedTech start-up based in Constance and accompanies people on their way to a pain-free life. True to the motto SIMPLE. BETTER. we analyze the individual gait over several hours in everyday situations with the help of IMU sensor soles. We simulate the effects of walking and shoes on the body using a precise biomechanical 3D model independent of location, time, and specialist personnel. This allows clients to understand the cause of their complaints transparently for the first time. Suitable recommendations for action are then made based on the analysis.

The project is supervised by EVERSION co-founder and leading software developer Lucas Heitele.
